CallLog

Easy to use program to register conversations and phone calls.

With this program you can register contacts, telephone numbers, subjects and additional information.

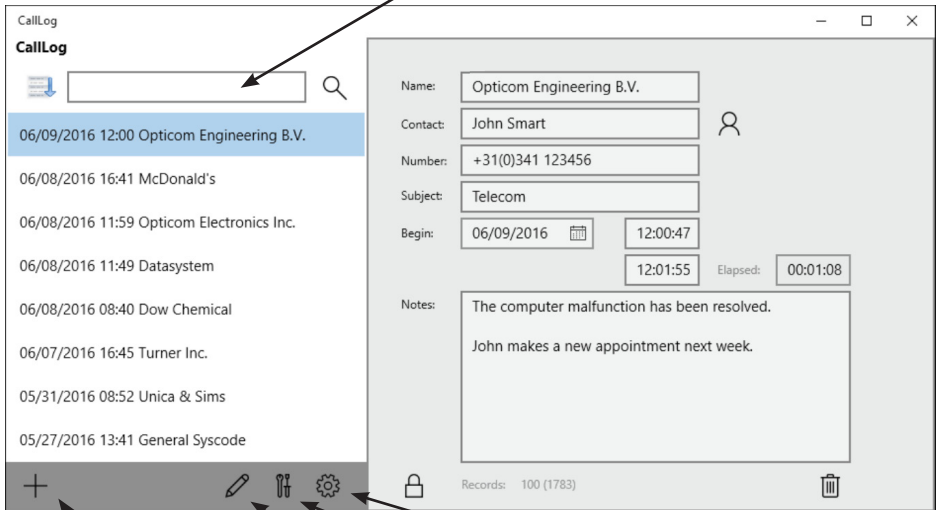

The duration of each call is measured and registered.

Features:

- Use of Windows Contacts
- Search in your historical data using contact information and/or subject
- Backup and restore to and from local drives and Windows OneDrive
- Import tsv-files and Apple PhoneLog data

CallLog View

You can search for a call by typing a part of the text. After a delay (default 750 mSec) the search will start.

Add a new call

Settings

Tools

Modify a call

When a call is selected, tapping this button will search for all items of the same name.

Double tapping a call will also open the Modify view.

 When CallLog runs on a PC, you can unlock the view and modify the data.

 Tap this button to remove the selected call.

CallLog Add or Modify

This screen is used for adding or modify a call.

Modify a call by bouble tapping a selected call or tap  on the CallLog view.

Use this button to copy the Name and contact information from the last selected call (only for new calls).

Get a contact from your Windows phone or PC.

Get the actual date and time.

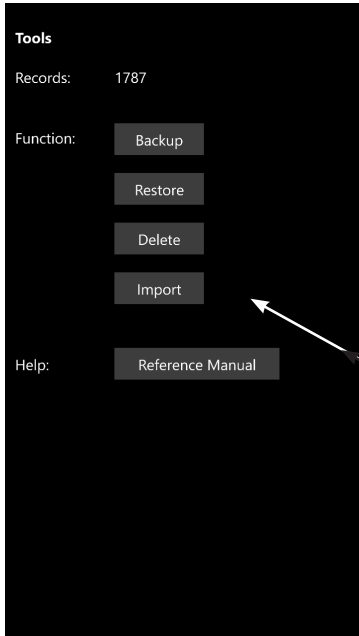

Start and stop the timer.

Remove the call.

Next or previous call.

CallLog Tools

Tools is used to backup, restore or delete records form the CallLog database. You can also import data from other programs.

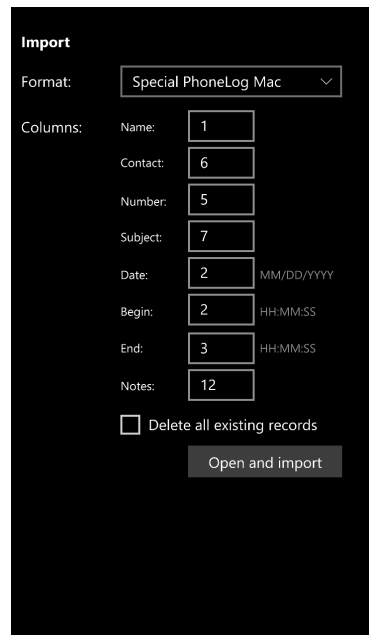

Backup and restore all records to any location, including OneDrive.

Import standard tsv files (Tab Separated Values) or Special PhoneLog files from a Mac.

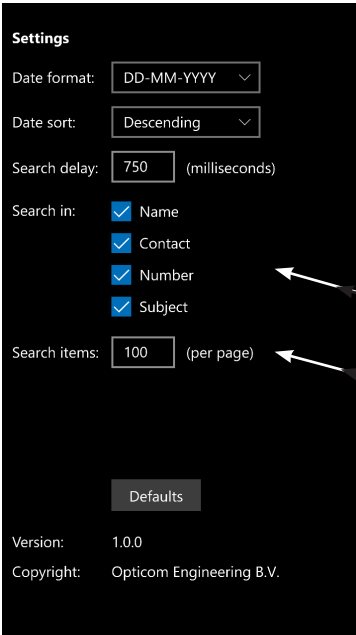

Enter the columns (open the tsv file for example with Excel other spreadsheet program for details).

Please contact info@opticpro.nl for questions or other dataformats and add the datafile to import.

CallLog Settings

Customize CallLog, using the following settings.

The screenshot shows the 'Settings' screen for CallLog. It features a dark background with white text. The settings are as follows:

- Date format:** A dropdown menu showing 'DD-MM-YYYY'.
- Date sort:** A dropdown menu showing 'Descending'.
- Search delay:** A text input field containing '750' followed by '(milliseconds)'.
- Search in:** A list of four checkboxes, all of which are checked: 'Name', 'Contact', 'Number', and 'Subject'.
- Search items:** A text input field containing '100' followed by '(per page)'.

At the bottom of the settings area is a 'Defaults' button. Below the settings, the version '1.0.0' and copyright 'Opticom Engineering B.V.' are displayed.

Arrows from the text on the right point to the Date format dropdown, Date sort dropdown, Search delay input, the checked 'Number' checkbox, and the Search items input.

Date format:
DD-MM-YYYY
DD/MM/YYYY
MM/DD/YYYY

Sort the view descending or ascending.

The delay is used to start searching after typing characters.

Select the fields to use by the search request.

Maximum number of items per page. You can tap More (descending) or Previous (ascending) on the view for more items.

When you tap the Defaults button, all settings are reset to factory defaults.
